What is concussion?

The FA's

How to recognise a concussion

If any of the following signs or symptoms are present following an injury the player should be suspected of having a concussion and immediately removed from play or training and must not return to play that day. The Pocket Recognition tool may be used as an aid to the pitchside assessment (see Useful Links section)

If in doubt sit them out.

Ongoing management

Rest the body rest the brain.

Rest is the cornerstone of concussion treatment. This involves resting the body, 'physical rest', and resting the brain, known as 'cognitive rest'. The period of rest allows symptoms to recover and in the non-professional setting allows a return to work or study prior to resuming training and playing.

Rest means avoiding:

- F Physical activities such as running, cycling, swimming, physical work activities etc.
 - F Cognitive activities (thinking activities), such as school work, homework, reading, television, video games
- diagnosis of concussion may need to have allowance made for impaired cognition during recovery, such as additional time for classwork, homework and exams

Anyone with a concussion or suspected concussion should NOT:

- F be left alone
 - F consume alcohol
- thereafter should avoid alcohol until free of all

Graduated return to play protocol

Stages 2-5 take a minimum of 24 hours in adults, 48 hours in those aged 19 and under.

Standard Return to Play Pathway

The minimum time in which a player can return to play in the standard care setting is summarised in the table below. Each day comprises a 24 period. The pathway begins at midnight on the day of injury.
